PELUDACOIN (PUDA) · INVESTOR UPDATE

Where PUDA stands, and what comes next

October 2026 · Confidential · For [Investor name]

Dear [Investor name],

Here is a short update on PUDA: the decisions we have taken, the work done this month, how the system performed over six years of real markets, what is not proven yet and the next steps. The full investor presentation is attached.

1. Decisions made

Launch in two phases. Phase 1: a smart contract audit by a single recognised firm (CertiK, Hacken or SolidProof), a private presale to initial investors with KYC, and marketing to reach them. These are the only upfront costs. Phase 2, paid at launch with the funds raised: the company in El Salvador (S.A. de C.V.), UIF and CNAD issuer registration, the offering document (DIR) with an independent certifier, and the public offering through licensed providers (DASPs).

The reserve backing PUDA is never put at risk. It stays in custody, off the exchange. The trading system can lose at most the reserve's annual yield (about 4%, depending on interest rates). A global annual cap in the trading software enforces it: once reached, every agent stops until the next year. PUDA's market price can fall; the backing of each token cannot.

Trading system: eleven agents, one per subaccount. $1M per subaccount, at most 20% at stake, deployed in tranches from $50,000 per agent and increased only after profitable months. 3x leverage; trades of at most 48 hours (except the funding, DCA and collar agents); a pause at −10% and a stop at −20% per subaccount, which does not trade again until its strategy is fixed.

2. Work done

The trading software was reviewed end to end and its risk controls completed: mandatory stop losses, isolated margin, capital cap and ramp, per-agent modes and limits, demo-to-real graduation and the global annual loss cap. All covered by 91 automated tests.

A six-year real backtest (October 2020 – August 2026): the agents' own code on the real history of 104 cryptocurrencies, with hourly futures and spot candles, fees, slippage, funding and macro data rebuilt day by day with no look-ahead bias. It covers the 2021 bull run, the 2022 bear market with LUNA and FTX, the recovery and the falls of 2024 to 2026.

−7.8%
worst portfolio drawdown in 6 years (BTC: −76.7%)

−2.5%
worst portfolio year

+1.9%
during LUNA and Celsius (BTC: −48.1%)

−0.1%
during FTX (BTC: −24.5%)

YEAR BY YEAR: 8-SUBACCOUNT PORTFOLIO VS BTC	2020	2021	2022	2023	2024	2025	2026
Portfolio	+1.3%	+3.8%	−2.5%	−0.8%	+0.08%	+0.03%	−0.6%
BTC	+172.8%	+59.6%	−64.2%	+155.9%	+121.1%	−6.3%	−10.3%

3. What is not proven yet

The real backtest confirms that the capital is protected: in its worst year the portfolio lost 2.5%, within the ≈ 4% annual cap. **It does not yet support a return target:** over six years the portfolio made +1.3% on the subaccounts' total capital. We are therefore withdrawing the internal 3–5% monthly target until there is data to support it.

Before any real money is used, the weakest agents are adjusted or retired (SUB10, SUB2, SUB9, SUB8 and SUB11 are under review), the backtest is run again and the system spends 6 months on Bitget's demo environment.

4. Next steps

STEP	WHAT
Audit firm	Quotes from CertiK, Hacken and SolidProof; we choose one.
Marketing	Plan and budget to reach the initial investors.
Legal	Salvadoran lawyer to confirm the private presale route under the LEAD and the rules for a backed token.
Agent adjustments	Review the weakest agents and rerun the real backtest.
Demo	The eleven agents on Bitget Demo with the final configuration.
Partners	Shareholders' agreement: capital, split and vesting.

5. How you could help

- Your view on the presale size and on the audit firm.
- Introductions to potential initial investors, where appropriate.
- [Any other item to agree with you: role, contribution, timing.]

Best regards,

[Your name]
