

PELUDACoin (PUDA) · INVESTOR PRESENTATION · OCTOBER 2026

A registered token and a trading system with bounded risk

An issuer domiciled in El Salvador, an offering registered with the CNAD and eleven automated trading agents with loss limits in every subaccount.

Information document. It is not an offer to sell nor an investment recommendation.

SUMMARY

The proposal on one page

Regulated issuer

A corporation in El Salvador, registered with the UIF and as an issuer with the CNAD.

Audited presale

Audit by a recognised firm and a private presale to initial investors; then an offering registered with the CNAD.

Untouchable reserve

PUDA's backing stays in custody. The trading system can only lose its annual yield.

Eleven trading agents

\$1M per subaccount, at most \$200,000 at play, in tranches. Worst combined drawdown in the stress test: -6.7%.

THE ISSUER

A Salvadoran company, registered as an issuer with the CNAD

Incorporation in seven steps

1

Name

Reservation of the company name at the Commercial Registry (CNR).

2

Deed

Before a notary: shareholders, capital, purpose and management.

3

Registration

At the CNR: the company acquires legal personality.

4

NIT and NRC

Tax ID and VAT registration with the Treasury.

5

Business licence

Business licence and municipal registration.

6

Bank

Corporate account for capital and payments.

7

Representative

Registered appointment to sign before the UIF, CNAD and DASPs.

≈

3–6 weeks

Indicative total time, to be confirmed with the Salvadoran lawyer.

THE TOKEN

61.74M PUDA; 15% is allocated to the sale

Allocation	%	PUDA	Condition
Registered sale	15%	9,261,000	Through DASPs with KYC
Liquidity pool	5%	3,087,000	Liquidity locked for 24 months
Team and promotion	5%	3,087,000	1-year lock + 4-year release
Treasury	75%	46,305,000	Tranches only with a new registration, max. 5%/year

Offering conditions

- Audit by a recognised firm, published
- Private presale with KYC and per-investor limit
- Public sale only after CNAD registration
- Same price for everyone, no bonuses
- Purchase limit per wallet

THE LAUNCH IN TWO PHASES

Presale first, then the offering

1

Audit

A single recognised firm, chosen from CertiK, Hacken or SolidProof.

Q4 2026

2

Seal published

The security report, on the website before anything is sold.

Q4 2026

3

Private presale

Only to initial investors, with KYC and a per-investor limit.

Q1 2027

4

Marketing

Campaign to reach those initial investors.

Q1 2027

5

Company and UIF

With the funds raised: S.A. de C.V. and UIF registration.

Q1-Q2 2027

6

DIR and certifier

Offering document, reviewed by a certifier.

Q2 2027

7

CNAD registration

Required for any public sale.

Q2 2027

8

Public offering

Via DASPs with KYC; multisig treasury and locked liquidity.

Q3 2027

USE OF FUNDS

Every dollar raised, with a purpose and a limit

Eleven automated agents that never put at risk the reserve backing PUDA.

Different strategies that do not depend on the same market direction: neutral, hedged long and a short account that profits in falls. What they can lose in a year is capped at the reserve's yield.

The reserve is never put at risk

Backing reserve

100% in custody, off the exchange: stablecoins in regulated custody, Treasury bills and gold.

Annual yield

≈ 4% of the reserve*. It is the only money the system can lose in a year.

Trading system

If the year's losses reach the yield, all eleven agents stop until the next year.

In the worst year, the reserve ends as it started: at 100%.

* Indicative: depends on interest rates. PUDA's market price can fall; the backing of each token cannot.

HOW THE CAPITAL IS USED

Capital goes in by tranches, never all at once

\$1M

capital per subaccount

20%

at most at play: \$200,000

3x

leverage of the futures agents

48 h

maximum length of a trade

Each agent starts with \$50,000 at play. It moves up one step each month in profit and down one if it loses 5% from the start of the step.

THE ELEVEN AGENTS

Eleven agents, one per subaccount

Agent	Strategy	Role	At start	Max. at play
SUB6	Funding arbitrage	Neutral	Real money	\$200,000
SUB10	Cointegrated pairs	Neutral	Real money	\$200,000
SUB9	Dynamic collar	Hedged long	Real money	\$200,000
SUB8	Spot DCA	Core long	Real money	\$200,000
SUB5	Macro short	Downside hedge	Real money	\$200,000
SUB2	Statistical arbitrage	Satellite	Demo	\$100,000
SUB11	Supertrend	Satellite	Demo	\$100,000
SUB1	News (NLP)	Satellite	Demo	\$100,000
SUB4	Scalping	Satellite	Demo	\$100,000
SUB7	Adaptive grid	Satellite	Demo	\$100,000
SUB3	Copy trading	Satellite	On hold	—

Five layers of protection

Every order	Mandatory stop loss: the system rejects an order without one or with one more than 25% away.
Every position	Isolated margin: a position can only lose its own margin.
Every subaccount	At most 20% at play; 14-day pause at -10% and permanent stop at -20%.
The whole system	Maximum annual loss = the reserve's yield. Once reached, everything stops until the next year.
The reserve	Off the exchange and in custody. Never used for trading.

TESTING

Three years of extreme markets, simulated

−6.7%

Worst drawdown, combined

8 subaccounts tested together (\$8M)

−3.4%

Worst month, combined

over 3 years and 9 paths

1 of 36

**Years in which the 4% cap
would trigger**

worst year without the cap: −5.7%

Full cycle

Euphoria, a −70% crash and two one-day collapses like LUNA and FTX.

3-year bear market

BTC falls 55% to 95%, with false rebounds.

Sideways

Three years without a trend, with sharp drops that recover.

Risk test on simulated markets: it does not predict returns. Next step: backtest on real Bitget history and 6 months on demo.

DIVERSIFICATION

If one loses, another wins

Agent	Role	Average	Worst month
BTC	Market	-33.9%	-56.7%
SUB11	Supertrend	+3.7%	-7.5%
SUB5	Downside hedge	+1.2%	-4.8%
SUB10	Pairs · neutral	+0.1%	-2.0%
SUB6	Funding · neutral	-0.1%	-0.5%
SUB9	Hedged long	-0.8%	-5.2%
SUB7	Grid	-1.0%	-4.1%
SUB8	Core long	-1.3%	-5.1%
SUB2	Statistical arbitrage	-3.3%	-10.7%
Combined	8 subaccounts	-0.4%	-3.4%

-0.4%

What the combined system lost, on average, in the three worst BTC months of each scenario, while BTC fell 33.9%. What the long agents lose is offset by the short account and the neutral strategies.

RETURNS

Management target: 3–5% a month on what is at play

Illustrative monthly scenarios, with every agent at its maximum (not forecasts)

Month	Per agent (\$200,000)	System (\$1.5M)	On \$11M
1%	\$2,000	\$15,000	0.14%
3%	\$6,000	\$45,000	0.41%
5%	\$10,000	\$75,000	0.68%

How it is validated

Backtest on real Bitget history and 6 months on demo before using real money. The target is adjusted to what that data shows.

What it takes to start

Phase 1 · The only upfront costs
Audit by a single recognised firm: [\$__]
Marketing for the initial investors: [\$__]

Phase 2 · At launch, with the funds raised	
Item	Amount
Lawyers, incorporation and registrations	[\$__]
CNAD: application + annual fee*	≈ \$6,270 + \$4,050/year
Structurer and certifier	2–4% of funds raised

Trading system

Item	Amount
Reserve: 11 subaccounts × \$1M	\$11M
At play in month one (5 × \$50,000)	\$250,000
Maximum at play, all graduated	\$1.5M
Maximum loss per year (≈4% of the reserve)**	≈ \$440,000
Infrastructure and data	[\$__ /month]

The reserve stays in custody, off the exchange.

* Fees from secondary sources, to be confirmed. ** Indicative reserve yield; depends on interest rates. [__] = quote pending.

TIMELINE

From the company to the offering

When	What
Oct–Dec 2026	Smart contract audit by a single recognised firm
Jan–Mar 2027	Private presale to initial investors and marketing
Oct 2026–May 2027	Backtest on real history and 6 months of the system on demo
Feb–Apr 2027	Company (S.A. de C.V.), UIF and issuer registration with the CNAD
Apr–Jun 2027	Offering document (DIR), certifier and registration
Jun–Aug 2027	Public offering through DASPs with KYC
From Aug 2027	Liquidity, quarterly reports and treasury governance

Indicative dates: they depend on third parties (auditor, certifier, CNAD and DASPs).

NEXT STEPS

What we do in the coming weeks

1

Auditor

Quotes from CertiK, Hacken and SolidProof; one is chosen.

2

Marketing

Plan and budget for the initial investors.

3

Lawyer

Confirm the private presale route in El Salvador.

4

Real backtest

The system on Bitget's history.

5

Demo

The eleven agents on Bitget Demo with the final configuration.

6

Partners

Capital, split and vesting in the shareholders' agreement.

TRANSPARENCY

What we commit to publish

Monthly results

Of the trading system, agent by agent.

Public treasury

2-of-3 multisig wallet, verifiable on-chain.

Audit

Of the smart contract, published before the offering.

Audited accounts

The company's financial statements.

Use of funds

Quarterly report on every line item.

No promises

Results are published, not promised.

Risks you should know

- Information document: it is not an offer of securities nor an investment recommendation.
- The presale is private and only for initial investors with KYC. The public sale will be made only after registration with the CNAD, through DASPs, and will not be available in the EU or the US until it complies with their rules.
- The system tests use simulated markets: they measure risk, they do not predict returns. No past or simulated result guarantees future results.
- Leveraged trading can cause losses. The limits reduce them; they do not eliminate them.
- Dependencies: the exchange, regulatory registration, the token's classification and third-party timelines.
